

SINGULARITY MKPL •

INVESTOR MEMO • 2026

The AI-powered code marketplace
for **game developers**.

Developers publish once. Clients search, adapt, and deploy in any language. Creators earn every time their code ships.

STAGE	RAISE	BEACHHEAD	TAM	CONTACT
Pre-Seed / Prototype	\$1.5M Pre-Seed	Indie Scripting — \$1.31B	General Software — \$522B	blkhrzn22@gmail.com

THE PROBLEM

Game development is broken by
redundancy.

AAA studios spend an average of **6 years** and **\$200M+** per title. 60% of that time is consumed rebuilding code that already exists elsewhere — in a different language, for a different engine, with no way to access or adapt it.

Infrastructure, not talent, is the bottleneck.

Thousands of capable developers work in isolated silos. There is no trusted, verifiable, cross-language marketplace for code assets. GitHub is a repository, not a marketplace. Nothing intelligently adapts logic across environments.

HOW IT WORKS — DEVELOPER SIDE & CLIENT SIDE

DEVELOPER SIDE

One-time onboarding — assets earn passively from every future use

1

Publish

Developer connects their GitHub repository to Singularity. Automated static & dynamic analysis verifies security, viability, stability, and functionality. Cleared assets are permanently tagged with the developer's Blockchain UID and indexed in the global marketplace by genre, original language, actions, and purpose.

SINGULARITY PLATFORM

AI-powered matching · Blockchain asset tracking · Smart Contract settlement

CLIENT SIDE

From idea to production-ready code in four steps

2

Search & Select

Client describes their need; AI finds the 5–10 closest matches by genre, action, or language. Client selects their preferred asset.

3

Procure

Smart Contract fires on selection — payment routes instantly to the original developer via Blockchain UID.

4

Translate

LLM engine converts code to the client's language and engine. Logic preserved. Re-verified post-translation.

5

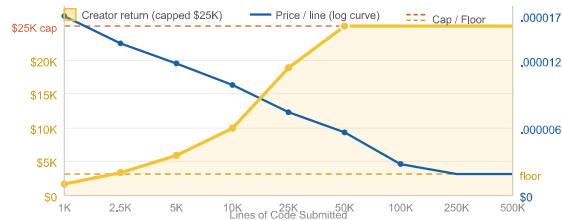

Ship

Adapted code pushed to the client's GitHub repo — function names adjusted, units converted, production-ready.

MARKET OPPORTUNITY

SOM — Indie Scripting	\$1.31B	Entry Point
SAM — Game Dev	\$141.5B	Scale Target
TAM — All Software	\$522B	Long-Term

UNIT ECONOMICS

* Baseline return at quality score 1.0, capped at \$25,000. Assumes 100 games × 1,000 copies per game. Final payout adjusted by quality multiplier (0.5×–1.25×) — security, test coverage, documentation, runtime stability. Platform fee not deducted.

REVENUE MODEL

Inverse-log pricing with a quality multiplier, floor, and ceiling.

Smart Contract fee model on every deployment — platform retains a cut; the remainder routes to the developer via Blockchain UID.

Price/line follows an inverse-log curve: ~\$0.000016 for small submissions, decaying to a \$0.000002 floor at scale. Returns cap at \$25K per asset per cycle (~40K lines). Final payouts scale by a quality multiplier (0.5×–1.25×) — security, test coverage, documentation, and runtime stability.

Future revenue: enterprise SLA subscriptions, priority verification queuing, CI/CD API access for studios.

CURRENT TRACTION

Texas A&M University

Game Development Center — academic validation & early developer access.

NSBE PCI Esports & Gaming

NSBE — developer community for supply-side onboarding.

Game Heads

Customer outreach — indie developer demand-side validation.

Future: Navy / DARPA

CRADA with Naval Surface Warfare Center Carderock — C-to-Rust translation automation.

ROADMAP

NOW — SPRING 2026

Prototype

Core engine in development. Early design testers. GitHub integration and static/dynamic analysis pipeline.

FALL 2026

Beta Launch

Pilot developer teams. Closed marketplace. LLM translation engine live. Smart Contract royalty payouts active.

2027

Public Release

Open market. Unity/Unreal integrations. Expansion into non-gaming software development verticals.

THE TEAM

CEO

Jeremiah Smith

Mechanical Engineering · North Carolina

CTO

Joshua Smith

Computer Science · Maryland

COO

Bafoday Dainkeh

Mechanical Engineering · Maryland

ENGINEER

Cameron Salisbury

Information Technology · Washington State

PROJECT MANAGER

Keith Gabbidon

Mechanical Engineering · Texas

ADVISOR

Dr. James McCoy

Computer Engineering · Maryland

THE ASK

PRE-SEED RAISE TARGET

\$1.5M

18–24 month runway to MVP & Demo Day readiness

ALLOCATION

- Engineering (~55%) — LLM translation pipeline, verification engine, GitHub OAuth, blockchain UID
- Legal & IP (~20%) — smart contract architecture, IP protection, licensing, Trade Secret Registration
- Community (~25%) — developer onboarding, studio outreach, marketing

SAFE note (uncapped MFN or \$8M–\$12M cap) · Angels, micro-VCs, dev-tools accelerators
